Security and UNIX design Security was not a primary design goal of UNIX; dominant goals were modularity, portability and efficiency. UNIX provides sufficient security mechanisms that have to be properly configured and administered. The main security strength of UNIX systems comes from open source implementation which helps improve its code base.

The UNIX System UNIX Operating System Security By F. T. GRAMPP* and R. H. MORRIS* (Manuscript received February 7, 1984) Computing systems that are easy to access and that facilitate communication with other systems are by their nature difficult to secure. Most often, though, the level of security that is actually achieved is far below what it could be.
