4.2 Fundamentals of Laser Surface Processing One of the major advantages of the laser as a tool for material processing is the ability to precisely control where in the material and at what rate energy is deposited. This control is exercised through the proper selection of laser processing parameters to achieve the desired material modification.

A Survey of the Acute Effects of UV Lasers on Human and

Most artificial sources of UV, except for lasers, emit a spectral continuum of UV containing characteristic peaks, troughs and lines. These sources include various lamps used in medicine, industry, commerce, research and the home. Figure 1: Solar optical emissions before and after absorption by the atmosphere.

The effects of laser wavelength (355 nm and 532 nm) and laser pulse energy on the quantitative analysis of LiFePO₄ by atom probe tomography are considered. A systematic investigation of ultraviolet (UV, 355 nm) and green (532 nm) laser assisted field evaporation has revealed distinctly different behaviors.

injuries from lasers and from incoherent UV light sources. Section 4 gives guidance on controls for UV lasers to protect against hazardous skin exposures. Appendices 1-3 present information from ANSI, OSHA and ACGIH documents related to UV skin exposure. Work supported in part by US Department of Energy contract DE-AC02-76SF00515.

Skin exposure to lasers could lead to possible skin cancer. Stanford ESH Safety Manual Chapter on Laser Safety . Skin protection can best be achieved through engineering controls. Minimize exposure to . UV radiation by using beam shields and clothing (opaque gloves, tightly woven fabrics, laboratory jacket or coat).

Skin Hazards and Skin Protection Controls

Lasers working at ultraviolet wavelengths mix the facility to vaporize the main refractory of fabrics with the precision to ablate micron-sized holes in polymers and take away skinny layers from the cornea for corrective surgical procedure of the human eye.

The hazards of lasers depend on wavelength and on the structure of the eye as it relates to laser eye exposure and the potential for laser eye injury. Figure 2. FACT SHEET Retinal Injury Through the OSHA and LIA Alliance, LIA developed this fact sheet for informational purposes only.
