256B Algebraic Geometry David Nadler Notes by Qiaochu Yuan Spring 2013. 1 Vector bundles on the projective line This semester we will be focusing on coherent sheaves on smooth projective complex varieties. The organizing framework for this class will be a 2-dimensional topological field theory called the B-model.

It follows that the canonical bundle $K_{\mathbb{P}^n}$ (the dual of the determinant line bundle of the tangent bundle) is isomorphic to $\mathcal{O}(-n-1)$. This is a fundamental calculation for algebraic geometry. This is a fundamental calculation for algebraic geometry.

to the study of p -vector bundles on X and thus the study of G -vector bundles on X can be said to be an algebraic problem. Given a representation ρ of G into $GL(r; \mathbb{C})$, there is a natural G -vector bundle on X (of rank r) and consequently a p -vector bundle E on X associated to ρ : Let us call a p -vector bundle E on X ρ -unitary (respectively irre-

Moduli of p -Vector Bundles over an Algebraic Curve

The study of vector bundles over algebraic varieties has been stimulated over the last few years by successive waves of migrant concepts, largely from mathematical physics, whilst retaining its roots in old questions concerning subvarieties of projective space.

Vector Bundles in Algebraic Geometry edited by N. J. Hitchin

Ω^m is the bundle of m -dimensional differential forms, and the highest exterior power Ω^n is a line bundle known as the canonical bundle. These vector bundles are of particular importance as they turn out to be intrinsically defined, i.e. they do not depend on any particular embedding. References [1] Shafarevich, Igor. Basic Algebraic Geometry.

One readily checks that X -algebraic F -vector bundles on X (together with X -algebraic morphisms) form a category. An X -algebraic morphism of X -algebraic F -vector bundles is an isomorphism if and only if it is a bijective map. In particular, the category of algebraic F -vector bundles on X coincides with the category of f_X -algebraic F -vector bundles on X .
