We can complete the parallelogram as in the figure on the left. The vector from the origin to this new vertex is the vector $a+b$. In the figure on the right we have translated vector b so that its tail is the head of vector a . The sum $a+b$ is the directed third side of this triangle. © 2012 Pearson Education, Inc. 1

vectors, how to take scalar and vector products of vectors, and something of how to describe geometric and physical entities using vectors. This course will remind you about that good stuff, but goes on to introduce you to the subject of Vector Calculus which, like it says on the can, combines vector algebra with calculus.

2A1 Vector Algebra and Calculus - University of Oxford

Course overview: This course consists of three parts: vector calculus, linear algebra, and differential equations. The vector calculus section builds on the material from Math 114 and is concerned mainly with calculating contour and surface integrals. In the linear algebra section we will explore the abstract concept of a vector space.

Vector Calculus In this chapter we develop the fundamental theorem of the Calculus in two and three dimensions. This begins with a slight reinterpretation of that theorem. Consider the endpoints a ; b of the interval $[a, b]$ from a to b as the boundary of that interval. Then the fundamental theorem, in this form: (18.1) $\int_a^b f(x) dx = F(b) - F(a)$
