Noting that subband coding does not suffer from blocky noise, the proposed technique is designed to work in the subband domain. Once a coded image is decomposed into subbands by wavelet filters, most energy of the blocky noise exists on the predetermined block boundaries of their corresponding subbands.

The paper [3] proposed the wavelet transform (WT) method for detecting QRS complex in which they use Selective coefficient method based on identification of proper and optimum set of wavelet coefficients to reconstruct a wave or complex of interest from the ECG. In this paper, we propose a method based on wavelet detail coefficients.
