2. Highlight and run queries 2 and 3. Determine which query performs the best, and explain why you think that is the case. Query 2 performs the best. Query 2 takes advantage of the index by performing an index seek on the LastName column. Since Query 2 contains the wildcard at the beginning of the value, the

Solutions to the Exercises - Home - Springer

it is recommended that you create your queries in the standard query area. Ensure that you are in the standard query area by selecting Environment, Query Areas and then selecting Standard Area. 5. In the Query field, type DLS_QUERY_01 where is your initials) as the name for the query you are creating, and then click the Create button (see ...

Creating Basic Reports with the SAP Query Tool

a table that you want returned by a query. You can use various criteria to selectively restrict the rows that you see. Projection: You can use the projection capability in SQL to choose the columns in a table that you want returned by your query. You can choose as few or as many columns of the table as you require.
